I. Narrative Overview:

Access to surgical care in India is significantly limited, especially among low-income populations. Over 90% of them are estimated to lack access to necessary surgical procedures.

At the micro level, there are various factors which affect the uptake of free surgery, including but not limited to - lack of awareness of surgical provisions available, lack of awareness of one's own health conditions owing to limited access to medical check-ups, fear of anaesthesia & surgeries, lack of social support, difficulty navigating the healthcare system, lack of trust in doctors and hospitals, distance. Direct correlation has also been found between medical procedures and income levels, owing to this and a patient's work efficiency is also affected severely leading to sharp decline in income. Over the year's intervention promoting surgeries to individuals who require it urgently has shown results of increased income.

The Surgical Accredited & Trained Healthcare Initiative or SAATHI Project began with a six-month pilot phase in 2022, to identify the surgical needs, limitations, level of awareness and access to government entitlements. Phase I of the project began in May 2024 with a household survey of 10,021 covering over 48000 individuals in Behrampura, Vatva, Shahwadi, Ramol and Juhapura areas of Ahmedabad, with the maximum number of migrant population and with limited access to government entitlements and services. The overall vision of the project is to provide access to surgical needs of individuals living in some of Ahmedabad's most vulnerable areas.

The project was carried out through selected Community Health Workers specifically acquainted and trained for this project and were then addressed as SAATHIS (Surgical Accredited & Trained Healthcare Implementors), colloquially meaning friend. They received specialised training, focussing on symptom identification and counselling for pre- and post-surgery not just for the patient but also the family. In low-income communities the entire ecosystem of an individual affects decision making thus having the family on-board is equally essential.

Out of the individuals surveyed, surgical needs identified based on symptomology were 499, All identified individuals were taken for further check-ups after which only 170 were finally declared as needing surgeries, the rest required medication and rest. Majority of those identified for surgery are unemployed (52%) owing to their condition, they were unable to go to work. There has been a substantial increase in the income post-surgery, showcasing a direct correlation to health.

105 underwent successful surgeries in phase I, for issues like – tumour removal, cataract, heart surgeries, stone removal, tonsillitis and others. 65 patients are awaiting the surgeries and the rest 16 have refused, but efforts are being taken to convert these 16 as well. A detailed list of the beneficiary has been attached as an annexure.

Through concerted efforts, the project aims to improve healthcare access and outcomes for vulnerable populations residing in slum communities.

Symptoms identified:

Cataract	Back problem
Tumours	Vein problem
Kidney stone	Appendicitis
Knee pain	Liver problem
Heart problems	Verigon
Fracture	Cancer – mouth and breast
Gall bladder stones	Tonsilitis
Stomach ache	Breathing problems
Tooth issues	Urinary tract problems

II. Financial overview:**III. Objective of the intervention:**

1. Identification of individuals requiring surgical intervention.
2. Facilitate seamless connection between the individual and appropriate healthcare facilities, ensuring they receive the necessary treatment without facing financial barriers.
3. To address gaps in healthcare coverage by assisting eligible individuals in obtaining Ayushman Cards, thus enabling them to access subsidized or free healthcare services under the Ayushman Bharat scheme.
4. Remove the thought barriers for surgery and specialised health care.

IV. Methodology:

1. A specially curated curriculum was designed and shared with Community Health Workers (CHWs). The selected candidates for the project were henceforth referred to as SAATHIS. Each SAATHI has received a minimum of eight years of formal education and resides within the targeted slum.
2. Each SAATHI was trained to identify surgical needs based on symptoms and provide post-surgery counselling to both patients and their families.
3. The SAATHIS conducted a door-to-door survey covering over 10,000 households to assess surgical needs and access to government entitlements, particularly the Ayushman Card.
4. Hospital linkages were established with over 20 healthcare facilities, equipping SAATHIS with in-depth knowledge of surgeries covered under government schemes and the costs of those that are not.

5. Individuals identified for surgery were taken for further consultations at hospitals. Of these, 170 were confirmed for surgery by specialists, while the rest were prescribed medication and advised rest.
6. Once individuals were identified, SAATHIS provided counseling, as many patients backed out due to fear, misinformation, or other concerns. SAATHIS offered continuous guidance not only to the patients but also to their families, ensuring a supportive environment essential for pre- and post-surgery recovery.
7. Each SAATHI follows a rigorous monitoring process to track recovery and provide necessary support.
8. A comprehensive data management system is in place to monitor the progress of each individual/patient.

V. Achievements:

1. 105 surgeries completed successfully
2. A total of Rs. 26,05,000 saved for patients altogether.
3. 90% individuals have reported increase in income post-surgery and some have started receiving the same salary they did before the ailment set in.
4. Number of Ayushman card procured 42.
5. Number of Abha cards procured 33.
6. Linkages made with 25 hospitals across the city.

Hospital Linkages and Referrals:

A total of 25 hospitals, including both government and private institutions, were identified for this project. These include:

Government Hospitals: VS Hospital, Civil Hospital, GCS, LG Hospital, Jivraj Mehta Hospital, Sola Civil Hospital, SVP Hospital, Nagari Hospital, Nadiad General Hospital, Bapunagar General Hospital, Bareja General Hospital, Shardaben Hospital.

Private Hospitals & Specialized Centres: HCF, Sifa Hospital, Lokhandwala Hospital, Parth Hospital, Janni Hospital, SMS Hospital, UN Mehta Hospital, AIMS Hospital (Delhi), Bushra Hospital, Stavva Spine Hospital.

VI. Impact Assessment:

1. 105 surgeries completed successfully, with full recovery of the patient.
2. A total of Rs. 26,05,000 saved for patients altogether, through the procurement of Ayushman and Abha card.

3. 90% individuals have reported getting back the same income post-surgery, like they did before the ailment set in.
4. Increased awareness on health issues and possible course of rectification among the community members.

VII. Future program plan (in the project timeline before March 2025)

1. To convert the remaining unmet surgery patients to Met surgeries in the coming months.
2. Regular follow-up with the patients who underwent the surgeries.

VIII. Sustainability Plan: The SAATHI Project aims to create a sustainable model for improving access to surgical care for marginalized communities in Ahmedabad. By embedding trained community health workers (SAATHIS) within vulnerable populations, the project has fostered long-term trust, awareness, and access to essential healthcare services. The sustainability of this initiative hinges on continued financial support, strong hospital partnerships, community engagement, and systematic capacity-building.

IX. Difficulties/challenges and further actions you have taken

1. Stigma and superstitious beliefs are rampant in the community: For this the team conducted several awareness activities and also conducted door-to-door meetings with the identified unmet surgery patients to educate them.
2. Lack of support system at home: Several people identified did not have any support system for post-surgery assistance. Towards this the team spoke to the neighbours close by to help the individual for a few days post-surgery. The SAATHI also visited such houses regularly to check if there were any needs.
3. Lack of information on health issues and its possible severity: The team worked towards creating awareness on various health issues identified and also educated the community and the possible implications on the quality of their life if left untreated.

Annexure 1: Data of the project with details of the beneficiaries

Sr. No	Area Name	Beneficiary name	Gender	Age	Contact No.	Health problem	Has the surgery been done with PM-JAY	Name of the Hospital
1	V	Tajmunisha Mubinuddin Pathan	F	46	9328741185	A mild tumor	Yes	VS Hospital
